GERMAN DELEGATION

COCOM DOCUMENT 3439

Paris, February 4, 1959

4263059

MEMORANDUMBY THE GERMAN DELEGATION ON THE EXPORT
TO POLAND OF 2 HEATEXCHANGERS

6K

The German authorities have received a request to license the export to Poland of

2 heat-exchangers, consisting
of nickel-plated tubes, for 300 atü,
covered by item 33 AEL,
total value 35.714.-\$

The heat-exchangers will be used as replacement parts in an installation for the production of carbolic acid which was delivered to Poland by Messrs. Krebs & Co., of Paris and Berlin, in 1953 and mounted in the factory Zakłady Chemiczne Oswiecim, at Oswiecim-Dwory. This installation contains 4 heat-exchangers, the average operational life of which is about 3-4 years. In early 1958, 2 of these 4 heat-exchangers have been replaced (ref. Cocom Doc. 2887). It appears, therefore, reasonable that the other two heat-exchangers must now also be replaced.

Assurances against transshipment and re-export have been received from the Polish side.

In view of the civilian end-use established (servicing of equipment previously supplied) and the special policy adapted by the Committee towards Poland, the German authorities wish to grant the licence and trust that no objections will be raised against this export. The German Delegation would appreciate to have the views of governments at an early date.
